

ABSTRACT

CELL SELECTION METHOD AND MOBILE STATION

A cell selection method includes steps of: (A)
5 determining, at a mobile station (UE), whether or not a first
CSG cell satisfies a predetermined condition, when using a first
macro cell as a camped cell; and (B) changing, at the mobile
station (UE), the camped cell from the first macro cell to a
first CSG cell, when determined that the first CSG cell
10 satisfies the predetermined condition.
