

FOLDABLE ELECTRONIC DEVICE

【Abstract】

An electronic device may include a hinge structure and a housing
5 connected to the hinge structure. The hinge structure may include a shaft
member and an arm structure connected to the shaft member and the housing
such that the housing is rotatable. A guide hole, which extends in a direction
substantially perpendicular to the rotation axis of the housing, may be formed
in the housing. The arm structure may include a protruding portion
10 accommodated in the guide hole. The protruding portion may slidably move
inside the guide hole in accordance with the rotation of the housing. Another
embodiment identified through the specification is possible.
