

ABSTRACT

Disclosed in the present invention are a synchronous carrier selection method and apparatus, and a computer storage medium, the method comprising: a terminal determines at least two synchronous carriers from a plurality of carriers, the synchronous carriers having synchronization information; on the basis of parameter information of the at least two synchronous carriers, the terminal selects a first synchronous carrier from the at least two synchronous carriers, the first synchronous carrier being used for providing first synchronization information to the carriers in the plurality of carriers, such that the plurality of carriers synchronise data transmission on the basis of the first synchronisation information.
