

COPOLYMER FOR ANTIFOULING COATING COMPOSITION AND ANTIFOULING COATING COMPOSITION CONTAINING SAID COPOLYMER

ABSTRACT

The present invention provides a copolymer for an antifouling coating composition which can form an antifouling coating film which can continue to dissolve for a long period of time, exhibit good antifouling performance and realize good antifouling performance even in the draft section, where adhesion of aquatic fouling organisms is easy to occur.

According to the present invention, a copolymer for an antifouling coating composition obtained by copolymerizing a monomer (a) and an ethylenically unsaturated monomer (b) other than the monomer (a), wherein the monomer (a) is represented by general formula (1) is provided.
