

ABSTRACT

A COMPANION DISPLAY MODULE TO A MAIN DISPLAY SCREEN FOR DISPLAYING AUXILIARY INFORMATION NOT DISPLAYED BY THE MAIN DISPLAY SCREEN AND A PROCESSING METHOD THEREFOR

There is provided an electronic device operable with a computer. The computer can be configured to run/execute a program which can be associated with graphic based data and audio based data. The computer can include a main display screen which can be configured to display information based on graphic based data. The electronic device can include a display module which can be configured to display auxiliary information. Auxiliary information displayed by the display module, but not the main display, is derivable based on audio based data
