(54) Title: OFFLINE MODE FOR A BROWSER APPLICATION SERVICE

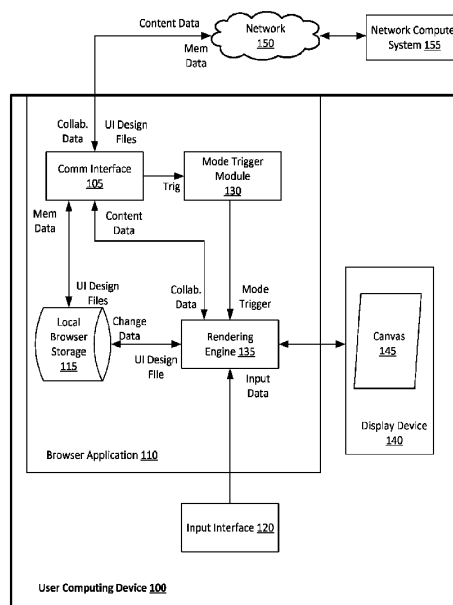

FIG. 1A

(57) Abstract: A computing device can execute a browser application to enable a user of the computing device to interact with a current user interface (UI) design file. The computing device can automatically preload a set of UI design files of the user from a backend network computer system into browser memory of the computing device. The computing device can detect an offline trigger on the computing device, and in response, initiate an offline mode on the browser application, where the offline mode enables the user to continue interacting with the current UI design file.
