DIAPHRAGM PUMP

Abstract

The invention relates to a diaphragm pump comprising a pump housing (2) which has a hydraulic chamber (6), and comprising a pump cover (3) which has a delivery chamber (7). A diaphragm (8) is clamped between the pump cover (3) and the pump housing (2) in a clamping region (10) in such a way that the hydraulic chamber (6) and the delivery chamber (7) are separated from one another. In the region of the center of the delivery chamber (7), the pump cover (3) has an at least partially convex bulge (12) into the delivery chamber (7).
