at least a first competing entity and a second competing entity are provided
602
a guess on the outcome of the game whereby the competing entities compete on the basis of respective scores is placed. This comprises deciding between (i) placing a guess that the score of the first entity is greater than the score of the second entity in a first area, the first area indicative of a guess that the first score of the first competing entity is greater than the second score of the second competing entity; (ii) placing a guess that the score of the second entity is greater than the score of the first entity in a second area, the second area indicative of a guess that the second score of the second competing entity is greater than the first score of the first competing entity; (iii) placing a guess that the scores of the first and second entities are the same in a third area, the third area indicative of a guess that the first and second scores are the same; or (iv) placing a guess of the exact score of at least one of the first and the second entity in a fourth area, the fourth area indicative of a guess of the exact score of at least one of the first competing entity and the second competing entity
604
a scoring system is used to provide separate respective scores to the competing entities
606
the scores are compared to determine the actual outcome of the game
608
it is determined if the guess matches the actual outcome of the game
