MULTI-LANGUAGE COMMUNICATION METHOD AND SYSTEM

ABSTRACT

The invention provides a multi-language communication method, comprising: providing to each of the persons access to a plurality of language options; receiving from each of one or more of the persons an indication of a respective choice of language chosen by the respective person from the language options; storing the language choices in a database; and making the language choices accessible by one or more applications so that the applications can when operated selectively provide output to each respective person in the respective language choice.
