

Method and system for monitoring quality control of an application

5

Abstract

The present disclosure provides methods and systems for monitoring quality control of an application. In some examples, there is provided a method for monitoring quality control of an application. The method comprises: identifying one or more files that are affected by a proposed change initiated by a user, the proposed change being initiated by a change request, the change request comprising data relating to the one or more files and information relating to the proposed change, wherein the identification is based on the data; and determining an area of the application that is affected by the proposed change based on the identified one or more files and the information.
