

## **OPERATING METHODS OF PURGE DEVICES FOR CONTAINERS**

### **ABSTRACT**

Operating methods of purge devices for containers are provided. The operating methods comprise a step of aligning (S106) an opening of a container (60) to a first purging unit (31) and placing the container in the purge device. After the container is purged, the container will be heated and filled with extreme clean dry air (XCDA) or nitrogen to finalize the purging process.
