

ABSTRACT

A medical device container

Problem

To provide a medical device container, which enables transportation of a stored medical device in a fixed condition.

Solution

A medical device container 1 comprises a container body 2 having an opening portion at the upper portion; a holder 4, which is housed in the container body 2, for holding at least one medical device; and a gas non-permeable film 3 seals the opening portion of the medical device container; wherein the internal pressure of the medical device container 1 is set to a value less than the atmospheric air pressure.
