

APPLICATORS AND CASES FOR ARTIFICIAL LASH EXTENSIONS

ABSTRACT

Cases can be used to house sets of artificial lashes in a specified arrangement. For example, lash fusions may be placed within multiple predefined indentations in the shape of an eyelid.

5 Applicators can be used to resiliently grasp all of the lash fusions in a set of lash extensions, and then simultaneously apply the entire set of lash extensions directly to the underside of the natural lashes. An applicator includes opposed arms that are connected to one another at an inner end designed to be gripped by an individual. The applicator can also include an outer end having a concave shape that is contoured to be substantially flush with the convex
10 shape of the lash line and the predefined indentations of a case that includes the set of lash extensions.
