

ABSTRACT OF THE DISCLOSURE**DRAINAGE SYSTEM FOR MULTI-STORY BUILDING**

A drainage system includes a base floor panel, a drainage unit and a filler. The base floor panel has
5 an accommodation groove formed on a panel top surface thereof. The drainage unit includes a drain manifold disposed in the accommodation groove, and a pipeline assembly connected to the drain manifold. The drain manifold has a height not exceeding a depth of the
10 accommodation groove, defines a receiving space, and has a manifold top surface, and a water inlet hole formed in the manifold top surface and communicating with the receiving space. The filler is disposed in the accommodation groove, and covers the drainage unit. The
15 water inlet hole is exposed from the filler.

FIG. 1 is suggested for publication.
