

## ABSTRACT

### LEG MASSAGER

There is provided a leg massager that massages user's leg by a position-adjustable massaging system for selectively massaging message target areas of the leg.

The leg massager (1) comprises: a lower massaging system (37) that massages a message target area of user's leg L including at least user's foot F; an upper massaging system (11) that massages an upper message target area located above the message target area which is massaged by the lower massaging system (37); a driving mechanism (23) that drives the upper massaging system (11) and the lower massaging system (37); and a rockably supporting portion (30) that supports the upper massaging system (11) for rocking motion about its horizontal axis.
