

Title of Invention: WASHING MACHINE

ABSTRACT

5 A washing machine in a first exemplary embodiment includes a housing, a
washing tub, water supply unit (300), detergent tank (450), softener tank (460), and
automatic liquid-agent feeding device (301). Water supply unit (300) is disposed inside the
housing and supplies water to the washing tub. Automatic liquid-agent feeding device
10 (301) feeds respective liquid agents stored in detergent tank (450) and softener tank (460)
to the washing tub. Water supply unit (300) is formed in a box shape to house detergent
tank (450) and softener tank (460) therein. In water supply unit (300), first to third water
guiding paths are formed, each of which allows water introduced from water supply valve
(310) to flow therethrough. Automatic liquid-agent feeding device (301) is attached on the
rear side of water supply unit (300), and is connected to the third water guiding path.
