(54) Title: SYSTEM AND METHOD FOR DEVELOPING BUSINESS PROCESS POLICIES

(57) Abstract: A system for abstracting point of view specific logic out of a business process policy and/or business process policy object is provided. The system includes cooperating objects. A first object, a business process policy object, implements generic business intelligence that handles a business event from a generic point of view. A second object, a policy definition object, is related to the business process policy object but implements point of view specific business intelligence related to handling a business event from a specific point of view. A user policy object is related to the policy definition object and stores point of view specific data that facilitates executing the point of view specific business intelligence for handling a business event from a specific point of view.
