

ABSTRACT

SYSTEM FOR FACILITATING ONE OR MORE TRANSACTIONS, A PLATFORM ASSOCIATED WITH THE SYSTEM AND A PROCESSING METHOD IN

ASSOCIATION THERETO

There is provided a platform suitable for use to facilitate transaction between at least a first user and a second user. The platform can include a criteria input portion usable by the first user to generate at least one input signal and a selection portion which can include at least one selection generated based on the generated input signal. The platform can further include a review portion which can include review information. The review information can include reference data which can include at least one of verification data associable with an indication as to whether the second user is a verified user registered with the platform and association data associable with an indication as to at least one mutual acquaintance between the first and second users. Verification data and/or association data can be indicative of a security factor associated with a transaction between the first user and the second user.
