ABSTRACT - DATA TESTING

5 A system is disclosed for testing a plurality of items of
test data, the system comprising memory means for storing
a plurality of items of stored data and, in response to
an input signal identifying one of the items of stored
data, producing an output signal dependent on that item
of stored data. The input signal is dependent on one of
the items of test data and on a feedback signal
comprising at least part of the output signal produced on
10 testing a previous item of test data, at least part of
the output signal providing an indication of the result
of the testing.
