ABSTRACT

The present application provides an information processing method and apparatus, an electronic device, a computer readable storage medium, and a computer program product. The method comprises: displaying, on an information page of a first object, first recommendation information with which a second object has interacted, the second object having a social relationship with the first object; and in response to an interaction operation of the first object on the first recommendation information, updating the first recommendation information to second recommendation information associated with the second object.
