

MOVING OBJECT AND METHOD FOR USING SAME

Abstract

5 The purpose of the present invention is to provide a moving object comprising a configuration suitable for miniaturization in a view from at least one direction, and to provide a method for using the same. Provided is a moving object comprising: two or more rotors positioned at the front side and at the rear side in the traveling direction; and a driving device that drives
10 the two or more rotors and rotates at least two of the two or more rotors in mutually different directions.
