

ENCLOSURE ASSEMBLY**ABSTRACT**

- 5 An enclosure assembly (100) for storage of products is disclosed. The assembly comprises a plurality of panels (102) that are joinable to form an enclosure (104). The assembly (100) also includes at least one cooling means (106) that is coupled to the enclosure (104) to introduce gas and maintain a predetermined temperature within the enclosure (104). The enclosure assembly (100) is suitable for storing products that
- 10 require a low temperature for their storage and shelf life. Multiple enclosures (100) can be assembled within a warehouse to accommodate varied microclimates for different products.
