(54) Title: METHOD AND APPARATUS FOR CODE VIRTUALIZATION AND REMOTE PROCESS CALL GENERATION

FIG. 3

(57) **Abstract:** A system and method for code virtualization and remote process call code on a user device. The method includes selecting a remote process on a remote server, the remote process correlated to at least one remote service, and receiving from at least one virtual code provider (VCP) on the remote server, a code snippet with parameters from pre-defined fields to call the remote process. The method installs a software development kit (SDK) downloaded from the remote server, onto the user device. The method inserts the code snippet based on the SDK into a local code base on the user device, and inserts parameter values into the code snippet and deploying the code snippet such that the code snippet calls the remote process with the SDK from the user device.
