(54) Title: COMMUNICATION METHOD, SYSTEM AND PRODUCTS

(57) Abstract: The present invention provides a communication method and/or system (10) that enables the creation of personalised identifiers (40) and/or language that can be used to convey information, messages, instructions, and/or attributes for the purpose of enhancing and/or integrating communications. In a preferred form the personalised identifiers (40) and/or language can act as elements that may be used as a means of expression that is driven by users (12), groups of users (12), or entities, in order to convey personal attributes or identity. In a further preferred form the personalised identifiers (40) may act as visual representations of identity in order to, for example, facilitate convenient and readily accessible means of cross-referencing indexed information. The present invention may also provide refined search facilities that feature graphical functions that enable enhanced visualisation of search results, and/or visualisation display applications.
