ABSTRACT OF THE DISCLOSURE

COMMERCIAL TRANSACTION MANAGEMENT SYSTEM AND METHOD FOR SAME

A commercial transaction management system using EDI in which office work in transaction between enterprises is electronized, wherein EDI data exchanged by the EDI between the one-on-one parties who do commercial transaction is down-loaded to database in a server for the purpose of commercial transaction. The server is arranged in the intermediate position between a plurality of parties for conducting commercial transactions and predetermined data are extracted from EDI data so as to build a relational database. Extracted are management information relating to commercial transactions such as unfair order, order in balance, time of delivery, inventory in hand, amount of accounts payable, and amount of accounts receivable. A person having predetermined authority can make access to database.
