

ABSTRACT

Providing a riser guide 15 having a number of guide pipes 16 along the bilge of a side shell plate below the waterline of a floating facility having a hull form. Fixedly providing front and rear cover members 20C as the fairing on the front and rear sides of the riser guide 15. Attaching a top cover member 20U and a bottom cover member 20D to cover the guide pipes 16 that protrude upward and downward from the body of the riser guide 15. Removing the top cover member 20U and the bottom cover member 20D by divers and installing the riser pipes in each guide pipes 16 after the floating production storage and offloading installation is transported to an installation sea area.
