(54) Title: METHOD FOR TRANSFORMING A THREE DIMENSIONAL DIGITAL MODEL IN A SPACE OBJECT MADE OF SHEET MATERIAL

fig. 2

(57) Abstract: The invention relates to a method for transforming a three dimensional digital model in a space object made of sheet material. The method allows the shape forming elements of the sheet matrix to be permanently or temporarily fixed so that it can be used for circulation copies or unique pieces of the space object in material. The method according to the invention included the object is a three dimensional digital model (1), which is brought in a geometry form (2) comprising the whole three dimensional digital model - the positive (1) and representing its matrix (2), whereby the outer contour of the three dimensional digital model (1), determined by a multitude of points belonging simultaneously to the three dimensional digital model (1) and to the geometry form (2), determines the dividing contour (3).
