(54) Title: METHOD AND SYSTEM FOR TOKEN GATEWAY

FIG. 1

(57) **Abstract:** A method is disclosed. The method includes receiving, by a token gateway, a first request message from a token requestor computer. The token gateway determines at least one token service computer from a plurality of token service computers, each token service computer in the plurality of token service computers operating independently of each other. The token gateway transmits at least one second request message to the at least one token service computer and receives, at least one first response message comprising at least one token and/or supplemental data associated with the at least one token from the at least one token service computer. The token gateway transmits a second response message to the token requestor computer, the second response message comprising the at least one token and/or the supplemental data.
