

ABSTRACT
WASHING MACHINE

A washing machine includes a main body, a water tub, and a washing
5 and spin-drying tub rotatably included in the water tub. The washing
machine also includes upper frame body (25) that is mounted at a top of the
main body and includes, in its center, clothing loading port (26) where laundry
is loaded and unloaded, and lid body (27) that is rotatably mounted to upper
frame body (25) to openably cover clothing loading port (26). Lid body (27)
10 includes upper lid frame (27a) and lower lid frame (27b) that is disposed under
upper lid frame (27a) along a periphery of upper lid frame (27a) and is formed
to include a recess in vertical section. Top face (25b) of upper frame body (25)
slopes down toward clothing loading port (26). A bottom face of lower lid frame
(27b) slopes down inward at a left and a right side of lower lid frame (27b).
15 Bottom face (36) of lid body (27) forms a predetermined gap with top face (25a)
of upper frame body (25).
