

ABSTRACT OF THE DISCLOSURE
DATA PROVIDING SYSTEM AND DISCLOSURE STATUS SETTING METHOD
IN DATA PROVIDING SYSTEM

The invention provides a disclosure limited data centralized management system capable of providing data on a real-time basis to a data receiver side, even in a case where changes such as addition, update, deletion and the like is made to a disclosed data, without performing maintenance of the data for each data provider side, and a disclosure status setting method in the disclosure limited data centralized management system. On an infrastructure system side, a means for collecting data from the data provider side, a means for aggregating the collected data to "a set of OLAP cube" and constructing a data warehouse, and a disclosure control means for controlling a disclosure master (disclosure enable/disable setting) which limits a disclosure of the data aggregated to a data receiver side, are provided.
