

TITLE OF INVENTION: RESIN COMPOSITION AND MOLDED ARTICLE

ABSTRACT

5 An object of the present invention is to provide a resin composition including a thermoplastic resin and an inorganic filler, which can easily undergo molding processing and has flexibility and a sense of massiveness, and a molded article thereof. A resin composition, including 15 to 50 parts by
10 mass of a specific 4-methyl-1-pentene/ α -olefin copolymer (A), 10 to 50 parts by mass of an inorganic filler (B), and 5 to 49 parts by mass of a thermoplastic elastomer (C) (a total amount of 4-methyl-1-pentene/ α -olefin copolymer (A), inorganic filler (B), and thermoplastic elastomer (C) is 100
15 parts by mass), wherein the thermoplastic elastomer (C) is at least one selected from the group consisting of an olefinic thermoplastic elastomer (C1) and a styrenic thermoplastic elastomer (C2); and a molded article including the resin composition.
