FIGURE 1

(57) Abstract: An underwater propulsion device includes a number of modules allowing it to be used in a range of configurations including a tow/pull type scooter (300), a thigh strap configuration (700), a calf strap configuration (1100), a push configuration (1200), a tank mount configuration (1300). The device may include an underwater changeable battery canister (1600), a hand controller (216) that senses movement about the radius bone to generate direction and speed control signals and/or a front mounted headlight (224).
