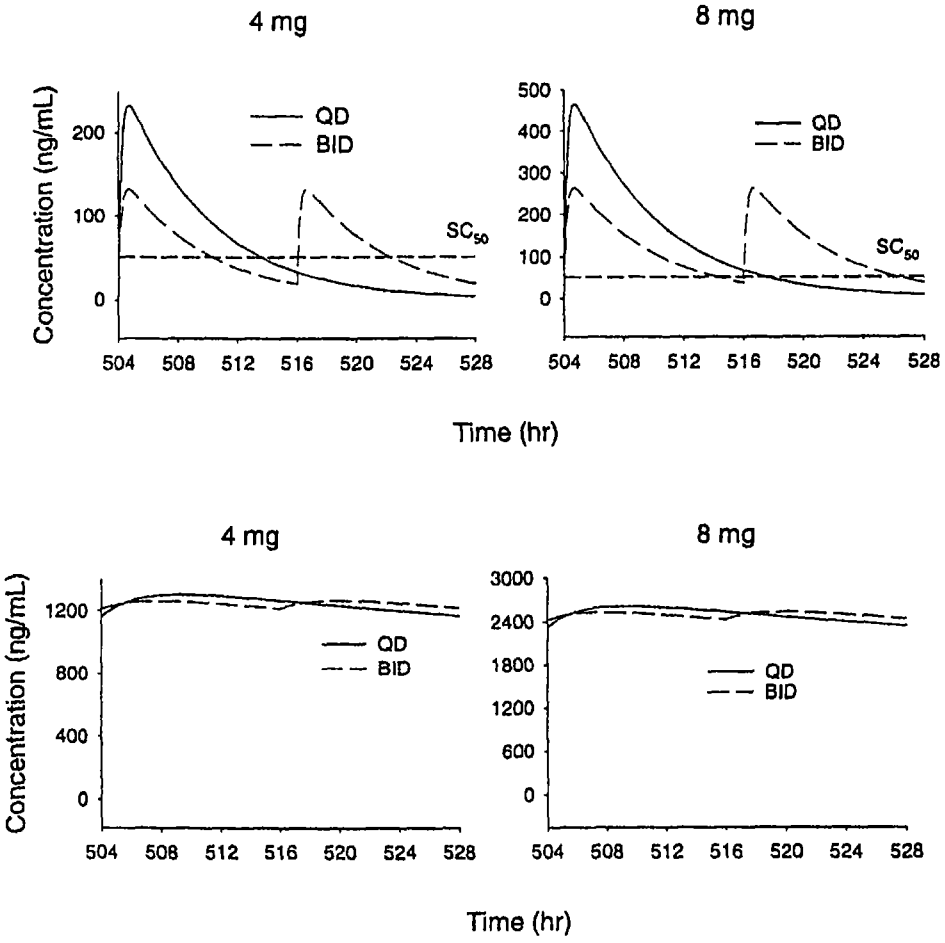

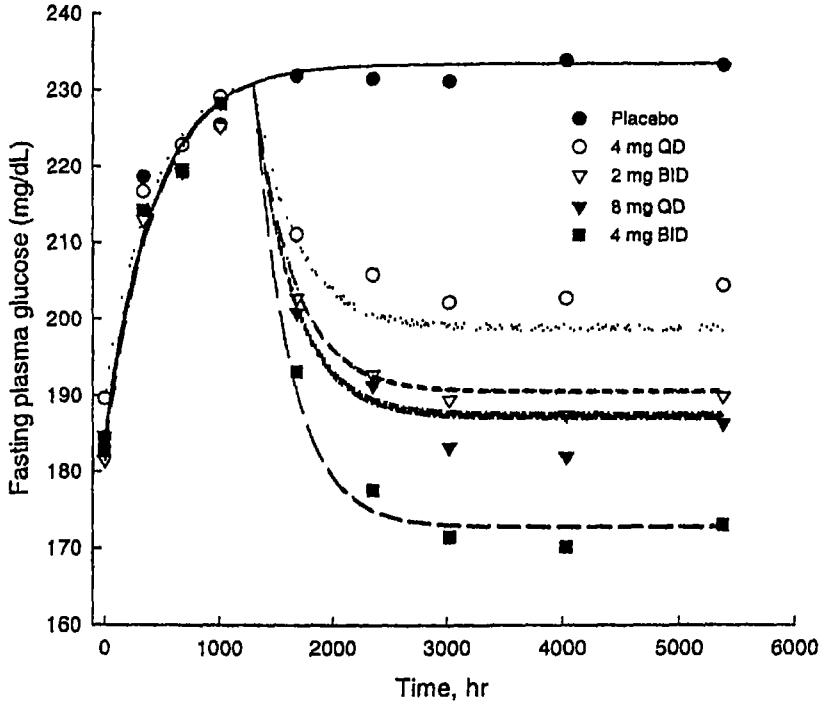

Figure 1: Simulated steady-state concentrations of Compound (I) (upper) and M10 (lower) over a 24 hour dosing interval following 4 mg and 8 mg total daily doses of Avandia

162162

G00002

Figure 2: Observed mean fasting glucose concentrations and predicted mean fasting plasma glucose concentrations vs time based on PK/PD modeling of the effect of Compound (I) concentrations by regimen following administration of Avandia

Symbols represent observed FPG, lines represent predicted FPG.

Time scale related to study definition: **0 hr = -6 week**

1008 hr = 0 week (initiation of first dose)

1680 hr = 4 week
