(54) Title: CONSTANT DENSITY SERVO INFORMATION IN A DISC DRIVE

(57) Abstract

A disc drive (100) is disclosed having an improved data recording capacity through the writing of servo information to one or more discs (106) of the disc drive at a frequency that varies for each of the tracks defined on the disc, the servo information read by and used to control the position of an associated head (120) of the disc drive. The servo information is preferably of constant density and arranged as a plurality of servo strips (162) extending radially from an inner to an outer diameter of the disc, each servo strip comprising a plurality of servo fields (164, 166), with a portion of the servo fields defining each of the tracks on the disc.
