(54) Title: A RAZOR BLADE WITH A PRINTED OBJECT

(57) Abstract: A razor cartridge (14) including at least one blade (20) positioned between the guard and the cap where the visible surface of the at least one razor blade includes a printed object (34). The printed object may extend continuously along the length of the razor blade and/or may have multiple portions having a comb-like structure. The printed object appears as a solid object to a viewer's naked eye. The solid object includes a plurality of printed ink dots not visible to the viewer's naked eye. The printed object of flexible, polymer ink may act as a guard element on the razor blade which helps with glide and to manage a user's skin (e.g., bulge) during shaving.
