

## VOICE FUNCTION CONTROL METHOD AND APPARATUS

### ABSTRACT

The present application provides a voice function control method. The voice function control method is applied to a voice assistant of a terminal, and includes:  
5 determining an associated application program based on a result of recognizing an input voice of a user, where the associated application program is configured to implement a function to be used by the user; and passing the input voice of the user to the associated application program, so that the associated application program recognizes the input voice of the user, and implements the function based on a  
10 recognition result. According to the technical solutions of the present application, the function required by the user can be more accurately and quickly completed, thereby improving voice function control efficiency.
