

Abstract

The application discloses a method for selecting a virtual object on a user interface of a terminal, an apparatus, a terminal and a storage medium, belonging to computer and Internet technologies. The method is performed by a terminal, including: displaying a user interface; obtaining a predefined execution area of a first operation of a first virtual object within a virtual environment; obtaining a visible boundary scope of the virtual environment; determining, based on the predefined execution area and the visible boundary scope, an effective execution area of the first operation within the virtual environment;; and determining, based on the effective execution area, a target virtual object.
