

TRUSTED LOGIN METHOD, SERVER, AND SYSTEM

ABSTRACT

The present invention discloses a trusted login method, server, and system. The
5 method includes: receiving a page access request sent by a target client terminal
corresponding to a second server, the page access request being used to request to access
a service page provided by a first server; acquiring a temporary trusted login token in
the page access request and judging whether the temporary trusted login token has a
service privilege to access the service page; and permitting the target client terminal to
10 log in to the first server in a trusted manner if the temporary trusted login token has the
service privilege to access the service page, and returning the service page that is
requested to be accessed by the target client terminal. The foregoing technical solution
solves a security problem in a trusted login in the prior art, and enhances the security of
the trusted login.
