(54) Title: SYSTEMS AND METHODS FOR SCHEDULING INFORMATION RETRIEVAL

200 ↘

Figure 2

(57) Abstract: Described embodiments relate to methods, systems and computer program product for scheduling retrieval of candidate information from a first entity system at the predicted time. The method comprises determining a dataset associated with historical information issued by a first entity, wherein the dataset comprises a plurality of entries, each entry comprising an information date; determining a period of successful retrieval of information issued by the first entity, or a period of issuance of information by the first entity, based on the information dates of the plurality of entries in the dataset; determining a predicted time of issuance of future information by the first entity based on the determined period; and scheduling retrieval of candidate information from a first entity system at the predicted time.
