

ABSTRACT

The present invention relates to a multi-purpose cooking appliance having a pressing plate and, more particularly, to
5 a multi-purpose cooking appliance having a pressing plate which provides an improved structure that allows the pressing plate to gently press food by elastic force when a lid is closed for cooking, enabling quick and convenient cooking while also allowing for a variety of dishes. According to the
10 present invention, various dishes are possible by providing an improved structure that allows the pressing plate provided in the multi-purpose cooking appliance to gently press food by elastic force when the lid is closed for cooking, and quick and convenient cooking is possible to improve the
15 convenience of cooking. In addition, usage and maintenance, such as cleaning, are also made convenient by detachably mounting the pressing plate on the bottom of the lid.
