

ABSTRACTPUSH-BUTTON PROVIDING TACTILE AND AUDIBLE SIGN

5 Pulse push-button comprising a tubular pusher guided in translation through a cylindrical body and acting on electrical contacts.

10 The pusher is fitted with a cam 30 that operates in conjunction with the active section 16, for example the elbowed tip, of a hairpin-shaped spring 15. The cam has at least one reversing point 35 and the adjacent wall 24 of the pusher is also fitted with a step 27 that allows the active section 16 of the spring 15 to strike
15 the bottom of the step when the elbow passes over the step.
