

ABSTRACT**LOCATABLE SLAB ASSEMBLY**

A locatable slab assembly for overlying a manhole cover located beneath a lowermost surface of a pavement is disclosed. The locatable slab assembly includes a slab body, a tubular member, a protective plug, and an electronic marker. The slab body is deposed to permit a central line of the slab body in line with a center line of the manhole cover. The electronic marker is configured to permit a region of the pavement in alignment with the center line of the manhole cover to be located. The locatable slab assembly together with the pavement thereon can be lifted to permit access of the manhole cover.
