

Anticariogenic Agent and Anticariogenic Composition

[Designation of Document] Abstract

The present invention provides a novel anticariogenic agent without side effects so that anticariogenic effect can also be obtained in humans who are highly sensitive to oligosaccharides and sugar alcohols. Also, an agent for preventing periodontal disease or for treating periodontal disease which has an effect of preventing or treating periodontal disease and which does not have side effects is provided. The invention relates to an anticariogenic agent and an anticariogenic composition comprising a bifidobacterium, an agent and a composition for preventing periodontal disease comprising a bifidobacterium and an agent and a composition for treating periodontal disease comprising a bifidobacterium.
