(54) Title: MULTIPLE PLY TISSUE PAPER WITH CONTINUOUS NETWORK REGIONS

(57) Abstract

A multiple ply tissue paper structure is disclosed. The paper structure includes a ply comprising discrete relatively low density regions dispersed throughout a relatively high density continuous network. The paper structure also include a ply which does not include discrete relatively low density regions dispersed throughout a relatively high density continuous network. The different structures of the two plies provide improved absorbency over a homogeneous multiple ply structure.
