(54) Title: DEVICE FOR ACCOMMODATING OBJECTS, AS WELL AS TRANSPORT MEANS

(57) Abstract: A device for accommodating objects, in particular for use in an airplane, comprising a housing, which has an access opening, as well as a door which is connected to the housing by at least one hinge so as to be pivotable between an open position and a closed position. The hinge defines a pivot axis for pivoting the door. The access opening is at least partially clear in the open position of the door and the access opening is at least partially closed off by the door in the closed position of the door. The door is lockable relative to the housing in its closed position. The door, in its closed position, is movable in a direction which extends substantially parallel to the pivot axis between a locked position and an unlocked position. The door, in its locked position, is locked relative to the housing, and the door, in its unlocked position, is pivotable about the pivot axis.
