

ABSTRACT

The present application relates to the technical field of network communications, and provides a security table entry generation method and apparatus, a network device, and a storage medium. The method comprises:
5 acquiring target link state information from a link state database, the target link state information comprising a first source prefix; and generating a security table entry for an ingress interface, the security table entry comprising the identifier of the ingress interface and the first source prefix. The present application can
10 improve the network security.
