

ABSTRACT

5 A process for crystallizing and collecting
N^o-trifluoroacetyl-basic amino acid from an aqueous
liquid in which N^o-trifluoroacetyl-basic amino acid is
dissolved which comprises growing the crystals in said
aqueous liquid while adjusting the pH to a pH value
within a range of the isoelectric point of
10 N^o-trifluoroacetyl-basic amino acid ± 3 under neutral or
acidic conditions at a temperature of 40°C or higher.
