

**Attachment for a drinking device for retronasal reception of an aroma substance, and
drinking device**

Abstract

An attachment for a drinking device comprises: an adapter element (14) to be fluid-tightly attached to a storage container (12) for drinking liquid; a head part (20) to be detachably fastened to the adapter element (14); an aroma container (32) through which air can flow and which can be fastened to the head part (20); and a transport channel (44) for drinking liquid, which can be fastened to the head part (20); wherein the adapter element (14) comprises a first adapter part (16) and a second adapter part (18); and the first adapter part (16) is adapted to be attached to the storage container (12) and to be attached to the second adapter part (18); and the second adapter part (18) comprises a first opening (36) having a first longitudinal axis (L1) and a second opening (40) having a second longitudinal axis (L2); wherein the first longitudinal axis (L1) is at an angle to the second longitudinal axis (L2), which is at least 20°.
