

ANTENNA SHIELD

ABSTRACT

A shield is provided for an antenna, the shield including a plurality of rods, each rod having at least an external surface made from an electrical conducting material, the rods being in parallel spatially spaced relationship one to another, the rods each having a respective curved transverse cross-section. Also provided is an antenna installation, including an antenna and such a shield. The antenna has a forward antenna face for emitting and/or receiving electromagnetic radiation. The shield is spaced forward of the forward antenna face by a forward spacing.
