

ABSTRACT

CONNECTION METHOD AND RELATED APPARATUS

This application provides a connection method and a related apparatus. The connection method includes: An access network device obtains connection mode preference information of a first terminal device, where the connection mode preference information indicates a connection mode preference of the first terminal device. The access network device sends path switching information to the first terminal device based on the connection mode preference information, where the path switching information is used to switch a connection mode between the first terminal device and the access network device. In this way, a connection mode to which the first terminal device switches can better meet a connection requirement of the first terminal device.
